                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                glucagonoma, diabetes mellitus, hyperlipidaemia, insulin insensitivity, Syndrome X, angiopathy, proliferative retinopathy, dawn phenomenon, emphropathy, gastric acid secretion, peptic ulcer, enterocutaneous fistula, pancreaticocutaneous fistula, dumping syndrome, watery diarrhoea syndrome, pancreaticiocutaneous fistula, dumping syndrome, watery diarrhoea syndrome, parcreaticis, allograft rejection, graft vessel bleeding, portal hypertension, gastrointestinal bleeding, obesity and opioid overdose. The compounds simultaneously elicit dopamine receptor agonist and somatostatin receptor agonist effects in vivo with enhanced biological activity over the native somatostatin and dopamine analogues alone. The present sequence is that of a peptide which was used to produce the somatostatin-dopamine chimeric analogues of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "D-form residue. compounds with a cytostatic, antithyroid, vasciroje, anti-inflammatory, antidiarrhoelic, anti-HIV, dermatological, anti-diabetric, osteopathic, antidiarrhoelic, anti-HIV, dermatological, anti-diabetric, osteopathic, antidiarrhoelic, antidiarrhoelic, antidiarrhoelic, antidiarrhoelic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, antidiarrhoetic, hypothyroidism, acromegaly, restencial selecter pylori proliferation, acromegaly, restencial desease, systemic sclerosis, external and internal panciarrhoes, chemotherapy related diarrhoes, aclaroderma irritable bowel syndrome, pancreaticis, small bowel obstruction, gastroesophageal ceflux, duodenogastric reflux, Cushing's syndrome, gonadotropinoma, hyporparathyroidism, Graves disease, diabetic neuropathy, Paget's disease, polycystic ovary disease, thyroid cancer, hepatoma, lenkaemia, chipotension, panic attacks, GH secreting adenomas, acromegally, TSH secreting adenomas, acromegally, TSH secreting adenomas, insulinoma, correcting adenomas, insulinoma, glucagonoma, diabetes mellitus, hyperlipidaemia, insulin insensitivity,
4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-fg]quinolin-9-yl-methyl) carbomyl) butyric acid. Optionally bound to 7-propyl-4,6,a,7,8,9,10,10a-octahydroindolo[4,3-fg]quinolin-9-carboxylic acid. Optionally bound to 1-(7-ally1-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-fg]quinolin-9-carboxyl)-3-ethylureidomethylaulfamyl acetic acid. Optionally bound to 3-(1-(7-ally1-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-fg]quinolin-9-carboxyl)-3-ethylureidopropyl)carbamic acid. Optionally bound to carbonic acid mono-(3-(1-(7-ally1-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-fg]quinolin-9-carbonyl)-3-ethylureidopropyl)carbamic acid. Optionally bound to carbonic acid mono-(3-(1-(7-ally1-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-fg]quinolin-9-carbonyl)-3-ethylureidolo[4,3-fg]quinolin-9-carbonyl)-3-(1-(7-ally1-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-fg]quinolin-9-carboyllocarbamic acid. Optionally bound to 3-(1-(7-ally1-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-fg]quinolin-9-carboyllocarbamic acid.
                                                                                                                                                                                                                                                                                                    fg]quinolin-9-carbonyl)-3-ethylureidopropyl)-Gly-.
Optionally bound to 4-(3-(1-(7-allyl-4,6,6a,7,8,9,10,10a-
octahydroindolo[4,3-fg]quinolin-9-carbonyl)-3-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel somatostatin-dopamine chimeric analogues

Syndrome X, angiopathy, proliferative retinopathy, dawn phenomenon, mephropathy, gastric acid secretion, peptic ulcer, enterocutaneous fistula, pancreaticocutaneous fistula, dumping syndrome, watery diarrhoea syndrome, pancreaticis, gastrointestinal hormone secreting tumour, angiogenesis, arthritis, gastrointestinal hormone secreting tumour, portal hypertension, gastrointestinal bleeding, obesity and optiod overdose. The compounds simultaneously slicit dopamine receptor agonist and somatostatin receptor agonist effects in vivo with enhanced alongoisticity over the native somatostatin and dopamine analogues alone. The present sequence is that of a peptide which was used to produce the somatostatin-dopamine chimeric analogues of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "1251-Succinoyl-Aspartic acid, D-form residue"

biologically active peptide, such as somatcatain or bombesin, to it is an example to peptide, such as somatcatain or bombesin, conjugated to a chemical compound through a linker that maintains the peptide's biological activity. The peptide agents may also include a cytostatic or therapeutic agent, label or chelating group and a peptide that increases the hydrophilic biodistribution of the agent. They are useful for treating tumours of the lung, breast, brain, eye, prostate, or colon, tumours of neuroendoorine origin (for e.g. carcinoid syndrome), and angiogenic blood vessels (claimed). Other diseases that can also be treated are inflammatory bowel disease, autoimmune disorders, rheumatoid arthitis, neoplastic cells or aberrantly proliferating cells, and arthitis, neoplastic cells or aberrantly proliferating cells, and arthitis, neoplastic of hyeas used in an examination of the bodistribution of hydrophilic peptide agents. A lack of accumulation of radioactivity was noted in normal tissue including liver, but rapid and himination of the peptide agent in urine and faeces. Note: The present sequence is identified as SEQ ID 11 in the disclosure (page 14), but it is not the same as the sequence given as SEQ ID 11 in the disclosure the sequence listing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The present sequence is that of a somatostatin analogue peptide. It is an example of peptide agents of the invention that comprise a biologically active peptide, such as somatostatin or bombesin, conjugated to a chemical compound through a linker that maintains the peptide a chemical compound through a linker that maintains the peptide is biological activity. The peptide agents may also include a cytostatic or therapeutic agent, label or chelating group and a peptide that increases the hydrophilic biodistribution of the agent. They are useful for treating tumours of the lung, breast, brain, eve, prostate, or colon, tumours of neuroendocrine origin (for e.g. carcinoid syndrome), and angiogenic blood vessels (claimed). Other diseases that can also be treated are inflammatory bowel disease, autoimmune disorders, rheumatoid article cells or aberrantly proliferating cells, and carromegaly. The present peptide has the ability to inhibit growth hormone release from primary cultures of rat pituitary cells, having an ICSO of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Biologically active peptides such as somatostatin or bombesin conjugated to chemical compounds through linkers, useful for treating tumors of the lung and breast, carcinoid syndrome, and tumors of angiogenic blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sun L;

The present sequence is that of a somatostatin analogue peptide. It is an example of peptide agents of the invention that comprise a biologically active peptide, such as somatostatin or bombesin, conjugated to a chemical compound through a linker that maintains the peptide's biological activity. The peptide agents may also include a cytostatic or therapeutic agent, label or chelating group and a peptide that increases the hydrophilic biodistribution of the agent. They are useful for treating tumours of the lung, breast, brain, eye, prostate, or colon, tumours of neuroendocrine origin (for e.g. carcinoid syndrome), and anaglogenic blood vessels (claimed). Other diseases that can also be treated are inflammatcry bowel diseases, autoimmune disorders, rheumatoid arthritis, neoplastic cells or aberrantly proliferating cells, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Biologically active peptides such as somatostatin or bombesin conjugated to chemical compounds through linkers, useful for treating tumors of the lung and breast, carcinoid syndrome, and tumors of angiogenic blood

peptide can be used as component B in a claimed composition comprising sometostatin analogue of formula (A-B), where A is Cys, or a peptide chain comprising one or more Cys residues, which is suitable for binding to a drug or chelator via a thiol linkage, and B is a naturally occurring to a drug or chelator wis a thiol linkage, and B is a naturally occurring or synthetic sometostatin peptide, or its fragment, that binds to the composition (Sorry). The drug or chelator is bound to the Cys residue(s) of component A by a thiol linkage. The drug is a therapeutic drug such as a radioisotope, a cytotoxin, an immunostimulant, an artianglogenic agent, a therapeutic gene, or a chemotherapeutic agent. The sometostatin analogue preferably binds to SSTR-positive cells. The sometostatin analogue preferably binds to SSTR-positive cells. A claimed method for detecting SSTR-costily comprises administering the sometostatin analogue in which a detectable label is bound to the Cys residue(s) of component A, and clained method for treating an SSTR-associated disorder is bound to the Cys residue(s) of component A. The SSTR-associated disorder is bound to the Cys residue(s) of component A. The SSTR-associated disorder is sepecially cancer. Thiol-mediated drug attachment an also be used with other targeting peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                A composition comprising a somatostatin analog useful for thiol-specific drug attachment to somatostatin and other targeting peptides, or for diagnosing or treating somatostatin receptor-associated disorders, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         somatostatin-dopamine chimeric analogue, agonist, cyclic; vascular disease; angiogenesis, connective disease; scleroderma; immune disease; rheumatoid arthritis; gastrointestinal tract disorder; irritable bowel syndrome; metabolic disease; hyperlipidaemia; cachexia; cancer; musculoskeletal disorder; panic disorder; opioid overdose; cytostatic; osteopathic; antithyroid; vasotropic; antiangiogenic; ophthalmological; antichabetic; dermatological; immunosuppressive; antiarthritic; antirheumatic; antinflammatory; antiulcer; antidiarthoeic; hepatotropic; antilipaemic; analgesic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present sequence is that of a synthetic somatostatin analogue. /note= "An N-terminal dopamine derivative (Dopl, Dop2 or Dop5) is attached to a Lys(dopamine derivative) modified tresidue, where this second dopamine derivative must match the type occurring at the N-terminus, e.g. Dop1-Lys(Dop1), Dop2-Lys(Dop2) etc. Optionally Lys can be a D-form residue." tumours, vascular diseases e.g. angiogenesis, connective diseases e.g. scleroderma, immune diseases e.g. rheumatoid arthritis, gastrointestinal tract disorders e.g. rhitable bowel syndrome, metabolic diseases e.g. hyperlipidaemia, cachexia, cancer, a musculoskeletal disorder, panic disorder or an opicid overdose. Accordingly, they exhibit activities that include cytostatic, osteopathic, darinthy, cid, vasotropic, antianjogenic, ophthalmological, antidiabetic, dermatological, immunosuppressive, antidiathetic, antirheumatic, antidiamatory, antidiaemic, analgesic, antidiatedic, hepatotropic, natidiaemic, analgesic, antidiadicily, anorectic, immunomodulaeror, cardiant, tranquillizer and antiaddictive. This peptide sequence is a somatostatin-dopamine chimeric New chimeric analog comprising at least one moiety which binds to one or more somatostatin and dopamine receptor(8) useful to treat e.g. neuroendocrine tumor, vascular diseases, connective tissue disease, that comprise at least one moiety that binds to one or more somatostatin receptors and at least one moiety that binds to one or more dopamine receptors, or a salt derived thereof. Specifically, it refers to analogues that may be used in vitro or in vivo for research, diagnostic and therapeutic agents to enhance the activity of somatostatin and dopamine i.e. working as receptor agonists. The present invention describes analogues with specificity for different types of somatostatin receptor subtypes that are accordingly associated with the treatment of particular diseases or conditions. As such, these analogues may be used to treat neoplasia and acromegaly as well as various neuroendocrine This invention relates to novel somatostatin-dopamine chimeric analogues antianginal; anorectic; immunomodulator; cardiant; tranquillizer; antiaddictive; acromegaly; neoplasia; neuroendocrine tumour. note = This disulphide bond cyclises the peptide /note= "C-terminal amide" (SCRC ) SAS SOC CONSEILS RECH & APPL SCI. Accordingly, they exhibit activities that include extostatic, osteopathic, antithytoid, vasotropic, antiangiogenic, ophthalmological, antidabetic, dermatological, immunosuppressive, antidarthritic, antirheumatic, antiinflammatory, antillocer, antidabetic, antianginguic, antillammatory, antillocer, antidabetic, immunosuppressive, antidadiali, anorectic, immunomodulator, cardiant, tranquillizer and antiandiactive, this peptide sequence is a somatostatin-dopamine chimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Inote= "An N-terminal dopamine derivative (Dop2) is attached to a Lys(dopamine derivative) modified residue, where this second dopamine derivative must match the type occurring at the N-terminus, i.e. Dop2-Lys(Dop2).
This invention relates to novel somatostatin-dopamine chimeric analogues that comprise at least one moiety that binds to one or more somatostatin receptors and at least one moiety that binds to one or more somatostatin receptors and at least one moiety that binds to one or more dopamine receptors, or a salt derived thereof. Specifically, it refers to analogues that may be used in vitro or in vivo for research, diagnostic dopamine i.e. working as receptor agonists. The present invention describes analogues with specificity for different types of somatostatin receptor subtypes that are accordingly associated with the treatment of particular diseases or conditions. As such, these analogues may be used to treat neoplasia and acromegaly as well as various neuroendocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       somatostatin-dopamine chimeric analogue; agonist; cyclic; vascular disease; angiogenesis; connective disease; scleroderma; immune disease; rheumatoid arthritis; gastrointestinal tract disorder; irritable bowel syndrome; metabolic disease; hyperlipidaemia; cachexia; cancer; musculoskeletal disorder; panic disorder; optoid overdose; cytostatic; osteopathic; antithyroid; vasotropic; antiangiogenic; ophibalmological; antidiabetic; dermatological; immunosuppressive; antiarthritic; antirheumatic; antiinflammatory; antilipeamic, analgesic; antianginal; anorectic; immunomodulator; cardiant; tranquillizer; antiaddictive; acromegaly; neoplassis; neuroendocrine tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                _______/label= OTHER //notes "OTHER //notes "OTHER Aepa, 4-(2-aminoethyl)-1-carboxy methyl-Misc-difference 3

Somatostatin-dopamine chimeric analogue-related peptide 55.

(first entry)

22-APR-2004

```
This invention relates to novel somatostatin-dopamine chimeric analogues
that comprise at least one moiety that binds to one or more somatostatin
creceptors and at least one moiety that binds to one or more dopamine
receptors and at least one moiety that binds to one or more dopamine
receptors as all derived thereof. Specifically, it refers to
analogues that may be used in vitro or in vivo for research, diagnostic
and therapeutic agents to enhance the activity of somatostatin and
copamine i.e. working as receptor agonists. The present invention
describes analogues with specificity for different types of somatostatin
creceptor subtypes that are accordingly associated with the treatment of
particular diseases or conditions. As such, these analogues may be used
to treat neoplasia and acromdealy as well as various neuroendocrine
to treat diseases or conditions. As such, these analogues may be used
to treat neoplasia and acromdealy as well as various neuroendocrine
tumours, vascular diseases e.g. anglogenesis, connective diseases e.g.
scleroderma, immune diseases e.g. arbumatoid arthritis, gastrointestinal
tract disorders e.g. irritable bowel syndrome, metabolic diseases e.g.
thyperlipidaemia, cachexia, cancer, a musculoskeletal disorder, panic
disorder or an opioid overdose. Accordingly, they exhibit activities that
include cytostatic, osteopathic, antithyroid, vasotropic, antianglogenic,
antianthritic, antirheumatic, antithematory, antiulcer,
antianthritic, antirheumatic, immunosuppressive,
antianthritic, antirheumatic, immunosuppressive,
antianthritic, antirheumatic, immunosuppressive,
antianthritic, antirheumatic, immunosuppressive,
antianthritic, antirheumatic, immunosuppressive,
antianthritic, antirheumatic, immunosuppressive, antianglessic,
antianthritic, antirheumatic, immunosuppressive, antianglessic,

This invention relates to novel somatostatin-dopamine chimeric analogues or their salts. The invention may be useful for the development of compounds with a cytostatic, antithyroid, vasoforopic, anti-inflammatory, antidiarrhoeic, anti-HIV dermatological, anti-diabetic, osteopathic, antidiarrhoeic, antidiarrhoeic, antidiarrhoeic, antidiarrhoeic, antidiarrhoeic, antidiarrhoeic, antidiarrhoeic, hypotensive, anorestic or antidatoricy antidiarrhoeic, hypotensive, anorestic or antidadictive activity through action as a dopamine receptor agonist and antidadictive activity through action as a dopamine receptor agonist. The invention may be useful for the treatences of lung cancer, glioma, anorexta, hypothyroidism, hyperaldosteronism, Helicobacter pylori proliferation, acromegaly, restences to pencreatic pseudocysts and ascites, Vibroma, nesidoblasticals, hyperancestic pseudocysts and ascites, Vibroma, nesidoblasticals, hyperathyroidism, cancer catlux, Cushing's syndrome, glarrhoea, AIDS related diarrhoea, scleroderma, irritable serius diarrhoea, prolecting desace, polycystic ovary disease, thyroid cancer, hepatoma, irritable reflux, duodenogastric reflux, Cushing's syndrome, goadcropinoma, insulinoma, cancer cachexia, orthostatic, hypotension, papercalloin, papercalloin, papercalloin, papercalloin, papercalloin, panic attacks, GH sease, thyroid cancer, hepatoma, diabetes mellitus, hyperlipidaemia, insulinoma, concerting adenomas, insulinoma, glucagonoma, diabetes mellitus, hyperlipidaemia, insulinoma, concertioned actacks, GH secreting adenomas, acromegally, gastric acid secretion, peptic ulcer, enterocutaneous fistula, pancreaticocutaneous fistula, dumping syndrome, pancreaticocutaneous fistula, dumping syndrome, pancreaticocutaneous fistula, dumping syndrome, pancreaticocutaneous fistula, dumping syndrome, and oppoid overdose. The compounds simultanial pleeding, observe and oppoid overdose. The compounds simultanial pleeding, observe and popidic effects in vivo with dopones and oppoid and partivity vovertes and pepti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                weatostatin-dopamine chimeric analogue; cytostatic; antithyroid;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   biological activity over the native somatostatin and dopamine analogues alone. The present sequence is that of a peptide which was used to produce the somatostatin-dopamine chimeric analogues of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

용 ð

This invention relates to novel somatostatin-dopamine chimeric analogues

or their salts. The invention may be useful for the development of

compounds with a cytostatic, antithyroid, vasotropic, anti-inflammatory,

antidarrhoeic, anti-HTV, dermatological, anti-diabetic, osteopathic,

antidarrhoeic, antid-HTV, dermatological, anti-diabetic, osteopathic,

antidacterial, immunomodulator, hypertensive, tranquiliser, antilipaemic,

comprocropic, antidicar, antiarthritic, hypotensive, anorectic or

antiaddictive activity through action may as a dopamine receptor agonist and

somatostatin receptor agonist. The invention may be useful for the

treatment of lung cancer, glloma, anorexia, hypothyroidism,

creatment of lung cancer, glloma, anorexia, hypothyroidism,

creatment of lung cancer, glloma, anorexia, systemal and internal

compactions of sease, systemic selevosis, external and internal

pencreatic pseudocysts and ascites, VIPoma, nesidoblastosis,

crelated diarrhoea, chemotherapy related obstruction, gastroesophageal

compactions, duodenogastric reflux, Cushing's syndrome, gonadcropinoma,

hyperparathyroidism, Garves disease, diabetic neuropathy, paget's

chisease, polycystic ovary disease, thyroid cancer, hepatoma, leukaemia,

meningloma, cancer cachexia, orthostatic, hypotension, postprandial /note= "Amino acid is Doc. The invention relates to novel sometobetain-dopanine connected analogues or their salts. The invention may be useful for the development of compounds with a cytostatic, antithyroid, vasotropic, anti-inflammatory, antibacterial, immunomodulator, hypertensive, tranquiliser, antilipaemic, antibacterial, immunomodulator, hypertensive, tranquiliser, antilipaemic, antibacterial, immunomodulator, hypertensive, tranquiliser, antilipaemic, comprorted of underly activity through action as a dopamine receptor agonist and somatostatin receptor agonist. The invention may be useful for the treatment of lung cancer, glioma, anorexia, hypothyroidism, crestenosis, Crohn's disease, systemic sclerosis, external and internal parcreatic pseudocysts and ascites, VIPoma, nesidoblastosis, hyperinsulinism, gastrinoma, 20linger-Ellison Syndrome, diarrhoea, AIDS created diarrhoea, scleroderma, inritable contexted diarrhoea, calenderial bowel obstruction, gastroesophageal ceflux, duodenogastric reflux, Cushing's syndrome, gonadotropinoma, cancer cachexia, orthostatic, hypotension, panic attacks, GH secreting adenomas, acromegally, TSH secreting adenomas, prolactin secreting adenomas, insulinoma, diabetes mellitus, hypotension, postprandial context, and sature actions exerting adenomas, insulinom, diabetes mellitus, hypotension, dawn phenomenon, comphropathy, gastric acid secretion, peptic ulcer, enterocutaneous fistula, dundome, pancreatitis, alloqual demomas, insulin diarrhoea syndrome, pancreatitis, astrictial, dundomes, insulin diarrhoea syndrome, pancreatitis, astrictial, dundomes secreting tumour, comphropathy, gastric acid secretion, peptic ulcer, enterocutaneous fistula, dundomes, pancreatitis, alloqual hormone secreting tumour, conjudensels, arthritis, alloqual phenomenon, graft vessel bleeding, obesity and oppoint companies and somatostatin receptor agonist effects in vivo with entanced and somatostatin receptor agonist effects in vivo with entanced and somatostations. This invention relates to novel somatostatin-dopamine chimeric analogues biological activity over the native somatostatin and dopamine analogues alone. The present sequence is that of a peptide which was used to produce the somatostatin-dopamine chimeric analogues of the invention. somatostatin-dopamine chimeric analogs useful for the treatment of /note= "Residue forms a bond to residue 9 to form a /note= "Residue forms a bond to residue 14 to form cyclic peptide" DB 7; Length 15; Score 59; DB 7 Pred. Location/Qualifiers

```
The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its pharmaceutically acceptable salt. The novel somatostatin agonists are useful for binding one or more of human somatostatin subrype receptors 1,-2,-3,-4 and -5, and for eliciting a somatostatin subrype receptors administering a somatostatin agonist or a pharmaceutically acceptable self-control agonist or a pharmaceutically acceptable salt of it to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal, including Cushing's syndrome, gonadotropinoma, hyperparathyroidism, pager a disease, Vipoma, nesidioblastosis, hyperareathyroidism, collinger-Bilison syndrome (AIDS) and other conditions, irritable bowel windown, pancreaticis, Crohn's disease, systemic sclerosis, thyroid cancer, psortasis, hypotension, panic attacks, scleroderma, small bowel cancer, psortasis, hypotension, panic attacks, scleroderma, small bowel cancer, psortasis, hypotension, panic attacks, scleroderma, small bowel cancer, psortasis, psortastic ascites, leukaemia, maningioma, cancer cachexia, acromegaly, restenosis, hepatoma, lung cancer, melanoma, contextinishing the accelerated growth of a solid tumour and decreasing body weight, treating insulin resistance, Syndrome X, prolonging the survival of pancreatic cells, fibrosis, hyperilpidaemia, hyperamylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide

The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its characterised by alkylation of the amide nitrogen, or its paramaceutically acceptable salt. The novel somatostatin agonists are useful for binding one or more of human somatostatin subtype receptors 1,-2,-3,-4 and -5, and for eliciting a somatostatin agonist effect, by administering a somatostatin agonist or a pharmaceutically acceptable salt for treating a disease or condition in a human or other animal, including Cushing's syndrome, gonadotropinoma, hyperharathyroidism, including Cushing's syndrome, panedidoblastosis, hyperharathyroidism, cancer, panerasis, hyportestecretory diarrhoea related to acquired immunodeficiency syndrome (AIDS) and other conditions, irritable bowel syndrome, panerasis, hypotension, panic attacks, sclerosis, thyroid cancer, psoriasis, hypotension, panic attacks, sclerosis, small bowel obstruction, gastrosepagaal reliux, duodenogastric rellux, Grave's clisease, polycystic ovary disease, upper gastrointestinal bleeding,
                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                      Osteopathic; cytostatic; antidiarrhoeic; antiinflammatory; antipsoriatic; hypertenstive; dermatological; antithyroid; immunomodulator; vasotropic; antilipaemic; somatostatin agonist; Cushing's syndrome; gonadotropinoma; hyperparathyroidism; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyzoidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide
                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "Modified by N-Methyl. C-terminal amide"

pancreatic pseudocysts, pancreatic ascites, leukaemia, meningioma, cancer acchearia, acromegaly, restenosis, hepatoma, lung cancer, melanoma, innibiting the accelerated growth of a solid tumour and decreasing weight, treating insulin resistance, Syndrome X, prolonging the survival of pancreatic cells, fibrosis, hyperlipidaemia, hyperamylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a somatostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Osteopathic; cytostatic; antidiarrhoeic; antiinflammatory; antipsoriatic; hypertenstive; dermatological; antithyroid; immunomodulator; vasotropic; antilipaemic; somatostatin agonist; Cushing's syndrome; gonadotropinoma; hyperparathyroidism; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its pharmaceutically acceptable salt. The novel somatostatin agonists are useful for binding one or more of human somatostatin subrype receptors 1,-2,-3,-4 and -5, and for eliciting a somatostatin agonist effect, by administering a somatostatin agonist effect, by administering a somatostatin agonist are useful to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide
                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                 Score 57; DB 6; Length 8;

CC The invention relates to novel somatostatin agonists, typically contacterised by alkylation of the amide nitrogen, or its pharmacettically acceptable salt. The novel somatostatin agonists are useful for binding one or more of human somatostatin subtype receptors of 1.2-3.4 and -5, and for eliciting a somatostatin agonist effect, by administering a somatostatin agonist effect, by administering a somatostatin agonist effect, by administering a disease or condition in a human or other animal, including Cushing's syndrome, gonadotropinoma, hyperparathyroidism, considered and specifications, hypersecretory diarrhoea related to acquired immunodeficiency syndrome, hypersecretory diarrhoea related to acquired immunodeficiency syndrome, hypersecretory diarrhoea related to acquired immunodeficiency syndrome, hypersecretory diarrhoea related to acquired syndrome, pancreatic, Cronical syndrome, pancreatic, Cronical syndrome, pancreatic, proving a disease, systemic selerosis, hypotension, panc attacks, scleroderma, small bowel construction, gastroesophagea reflux, duodenogastric reflux, Grave's disease, polycystic ovary disease, upper gastrointestinal bleeding, pancreatic pseudocysts, provincatic ascites, leukaemia, meningioma, cancer cachexia, acromedgaly, restenosis, hepatoma, lung cancer, melanoma, inhibiting the accelerated growth of a solid tumour and decreasing body combined to the inhibiting the accelerated growth of a solid tumour and decreasing body compound of pancreatic cells, fibrosis, hyperlipidaemia, hypersmyllanemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a somatostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Osteopathic, cytostatic, antidiarrhoeic, antiinflammatory, antipsoriatic,

The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its planmacterised by alkylation of the amide nitrogen, or its planmacterised by alkylation of the amide nitrogen, or its planmacterised by alkylation acre of human somatostatin subrype receptors useful for binding one or more of human somatostatin subrype receptors of 1,-2,-3,-4 and -5, and for eliciting a somatostatin agonist effect, by administering a somatostatin agonist or a pharmaceutically acceptable sating the it to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal, including Cushing's syndrome, gonadotropinoma, hyperparathyroidism, gastrinoma, paget a disease, Virpoma, nesidioblastosis, hyperinsulinism, gastrinoma, collinger-Ellison syndrome (AIDS) and other conditions, irritable bowel conver, psoriasis, hypotension, panic attacks, sclerosis, hypotension, ganic attacks, sclerosis, thyroid cancer, psoriasis, hypotension, panic attacks, scleroderma, small bowel confisease, polycystic ovary disease, upper gastrointestinal bleeding, pancreatic pseudocysts, pancreatic ascites, leukaemia, meningioma, cancer cachexia, acromegaly, restenosis, hepatoma, lung cancer, melanoma, cachexia, acromegaly, restenosis, kepatoma, lung cancer, melanoma, sundiring the accelerated growth of a solid tumour and decreasing body which the sarray of sundired sundired survival
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    weight, treating insulin resistance, Syndrome X, prolonging the survival of pancreatic cells, fibrosis, hyperlipidaemia, hyperamylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a somatostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Osteopathic; cytostatic; antidiarrhoeic; antiinflammatory; antipsoriatic; hypertenstive; dermatological; antithyroid; immunomodulator; vasotropic; antilipaemic; gomatostatin agonist; Cushing's syndrome; gonadotropinoma;
                                        hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and
Zollinger-Ellison syndrome, characterized by alkylation of amide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                    Novel somatostatin agonist, useful for treating Cushing's syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           71.2%; Score 57; DB 6; Length 8; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                       The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its planmacterised by alkylation of the amide nitrogen, or its planmacterised by alkylation of the amide nitrogen, or its planmacterised by alkylation more of human somatostatin subtype receptors useful for binding one or more of human somatostatin subtype receptors 1,-2,-3,-4 and -5, and for eliciting a somatostatin agonist effect, by administering a somatostatin agonist or a pharmaceutically acceptable salt of it to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal, including Cushing's syndrome, gonadotropinoma, hyperparathyroidism, paget a disease, VIPpoma, nesidioblastosis, hyperinsulinism, gastrinoma, collinger-Ellison syndrome (AIDS) and other conditions, irritable bowel immunodeficiency syndrome (AIDS) and other conditions, irritable bowel cancer, psoriasis, hypotension, panic attacks, scleroderma, small bowel obstruction, gastroesophageal reflux, duodenogastric reflux, Grave's disease, polycystic ovary disease, upper gastrointestinal bleeding, pancreatic pseudocysts, pancreatic ascites, leukaemia, meningioma, cancer cachexia, acromegaly, restenosia, hepatoma, lung cancer, melanoma, cachexia, acromegaly, restenosia, hepatoma, lung cancer, melanoma, cachexia, acromegaly, restenosia, accomedaly, meningioma, cacherasing body, collingiase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              weight, treating insulin resistance, Syndrome X, prolonging the survival of pancreatic cells, fibrosis, hyperlipidaemia, hyperpamylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a sematostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Osteopathic, cytostatic, antidiarrhosic, antiinflammatory, antipsoriatic, hypertenstive, dermatological, antithyroid, immunomodulator; vasotropic, antilipaemic, somatostatin agonist; Cushing's syndrome; gonadotropinoma;
                                                                                                                                    Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide

The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its characterised by alkylation of the amide nitrogen, or its characterised by alkylation of the amide nitrogen, or its pharmaceutically acceptable salt. The novel somatostatin subtype receptors useful for binding one or more of human somatostatin agonist effect, by administering a somatostatin agonist or a pharmaceutically acceptable administering a somatostatin agonist or part of it to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal, including Cushing's syndrome, gonadotropinoma, hyperparathyroidism, paget's disease, virone, pancreatitis, choin's disease, systemic sclerosis, irritable bowel immunodeficiency syndrome (AIDS) and other conditions, irritable bowel immunodeficiency syndrome (AIDS) and other conditions, irritable bowel immunodeficiency syndrome (AIDS) and other conditions, irritable bowel obstruction, gastroesophageal reflux, duodenogastric reflux, Grave's disease, polycystic ovary disease, upper gastrointestinal bleeding, cancer, pendocystic, pancreatic ascites, leukaemia, meningioma, cancer cachexia, acromegaly, restenosis, hepatoma, lung cancer, melanoma, cancer, inclining the accelerated growth of a solid tumour and decreasing benefits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              weight, treating insulin resistance, Syndrome X, prolonging the survival of pancreatic cells, fibrosis, hyperlipidaemia, hyperamylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a somatostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Osteopathic, cytostatic, antidiarrhoeic, antiinflammatory; antipsoriatic, hypertenstive; dermatological, antithyroid; immunomodulator; vasotropic; antilipaemic; somatostatin agonist; Cushing's syndrome; gonadotropinoma; hyperparathyroidism; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its plantaceutically acceptable salt. The novel somatostatin agonists are useful for binding one or more of human somatostatin subtype receptors 1,-2,-3,-4 and -5, and for eliciting a somatostatin subtype receptors cannifering a somatostatin agonist of the salt of it to a recipient in need of it. The somatostatin agonists are not lucluding Cushing's syndrome, gonadotropinoma, hyperparathyroidism, paget's disease, ViPoma, nesidioblastosis, hyperinaulinism, gastreinoma, pancreatitis, Crohn's disease, systemic solerosis, thyroid sminandeficienty syndrome, hypersecretory diarrhoea related to acquired manunodeficienty syndrome, hypersecretory diarrhoea related to acquired syndrome, pancreatitis, Crohn's disease, systemic solerosis, thyroid cancer, psoriasis, hypotension, panic attacks, scleroderma, small bowel syndrome, pancreatic ovary disease, upper gastrointestinal bleeding, cancering agartosophageal reflux, duodenogastric reflux, Grave's disease, polycystic ovary disease, upper gastrointestinal bleeding, cancering pseudocysts, pancreatic ascites, leukaemia, meningioma, cancer cachexia, acromegaly, references, hepstoma, lung cancer melanoma, inhibiting the accelerated growth of a solid tumour and decreasing body whenever all proversely cancering insulin resistance, Syndrome X, prolonging the survival humannylarity and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame man and prolaminame.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     perprolactinaemia and prolactinomas. This sequence represents a peptide a sematostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match 71.2%; Score 57; DB 6; Length 8; Best Local Similarity 100.0%; Pred. This invention relates to novel targeted cytotoxic compounds which comprise a cytotoxic moiety bound to a targeting moiety. The invention may be useful for the production of compounds with a cytostatic, antianflammatory or vasotropic activity acting as somatostatin receptor radioligand binders. The invention may be useful for the treatment of disease, for example fibrosis, benign prostatic hyperplasis, atherosclerosis, restenosis, cancer (such as breast, colon, pancreas, prostate, lung, small cell lung, ovarian, hematopolatic and epidermal cancer) and disease associated with undesired proliferation of ealls that express at least one somatostatin-type, bombeasin-type and LHRH-type receptors. The compounds have improved properties such as targeting specificity, systemic toxicity and pharmacokinetics. The present sequence is that of a peptide which may be used during the production of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gabs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

```
This invention relates to novel targeted cytotoxic compounds which comprise a cytotoxic moiety bound to a targeting moiety. The invention may be useful for the production of compounds with a cytostatic, antiantelesses to activity acting as somatostatin receptor radioligand binders. The invention may be useful for the treatment of disease, for example fibrosis, benign prostatic hyperplasia, atherosclerosis, restenosis, cancer (such as breast, colon, pancreas, prostate, lung, small cell lung, ovarian, hematopoletic and epidermal cancer) and disease associated with undesired proliferation of ealls that express at least one somatostatin-type, bombesin-type and LHRH-type receptors. The compounds have improved properties such as targeting specificity, systemic toxicity and pharmacokinetics. The present sequence is that the present sequence is that the compounds have been appropriate such as targeting at that of a peptide which may be used during the production of a

                                                                                                                                                        ð
                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                comprise a cytocoxic moiety bound to a targeting moiety. The invention may be useful for the production of compounds with a cytostatic, antiatrates the production of compounds with a cytostatic, antiatrates antiatrates of the production of compounds with a cytostatic, as antiatrates cancer. The invention may be useful for the treatment of disease, for example fibrosis, benign prostatic hyperplasia, atherosclerosis, restenosis, cancer (such as breast, colon, pancreas, prostate, lung, small cell lung, ovarian, hematopoletic and epidermal cancer) and disease associated with undesired proliferation of calls that express at least one somatostatin-type, bombesin-type and LHRH-type receptors. The compounds have improved properties such as targeting specificity, systemic toxicity and pharmacokinetics. The present sequence is that of a peptide which may be used during the production of a
                                                                                                                                                                            cytotoxin, cytostatic, antiarteriosclerotic; antiinflammatory; vasotropic, fibrosis; prostate hyperplasia; atherosclerosis; restenosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New targeted cytotoxic compounds useful for treating e.g. fibrosis, benign prostatic hyperplasia and atherosclerosis, comprises a cytotoxic molety bound to a targeting molety.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to novel targeted cytotoxic compounds which
                                                                                                                                                                                                                                                                                       'note= "8-amino-3, 6-dioxaoctanoic acid residues"
                                                                                                                                                       Novel cytotoxic compound-related peptide #2380.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (SCRC ) SAS SOC CONSEILS RECH & APPL SCI.
                                                                                                                                                                                                                                                                                                                                                                                                                         /note= "C-terminal amide"
                                                                                                                                                                                                                                                                                                                                                                        /note= "3-iodo tyrosine"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Kim SH;

comprise a cytocoxic moiety bound to a targeting moiety. The invention may be useful for the production of compounds with a cytostatic, antiartensclerotic, antiinflammatory or vasorropic activity acting as somatostatin receptor radioligand binders. The invention may be useful for the treatment of disease, for example fibrosis, benign prostatic phyperplasta, atherosclerosis, restenosis, cancer (such as breast, colon, pancreas, prostate, lung, small cell lung, ovarian, hematopoietic and epidermal cancer) and disease associated with undesired proliferation of
                                                                                                                                                                                                                                                                                                        New targeted cytotoxic compounds useful for treating e.g. fibrosis, benign prostatic hyperplasia and atherosclerosis, comprises a cytotoxic moiety bound to a targeting moiety.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to novel targeted cytotoxic compounds which

somatostatin receptor radioligand binders. The invention may be useful for the treatment of disease, for example fibrosis, benign prostatic hyperplasis, atherosclerosis, restenois, cancer (such as breast, colon, pancreas, prostate, lung, small cell lung, ovarian, hematopoietic and epidermal cancer) and disease associated with undesixed proliferation of cells that express at least one somatostatin-type, bombesin-type and LHRH-type receptors. The compounds have improved properties such as targeting specificity, systemic toxicity and pharmacokinetics. The present sequence is that of a peptide which may be used during the production of a

comprise a cytotoxic moiety bound to a targeting moiety. The invention may be useful for the production of compounds with a cytostatic, antinflammatory or vasotropic activity acting as somatostatin receptor radioligand binders. The invention may be useful for the treatment of disease, for example fibrosis, benign prostatic for the treatment of disease, for example fibrosis, benign prostatic pancreas, prostate, lung, small cell lung, ovarian, hematopoietic and epidermal cancer) and disease associated with undesired proliferation of cells that express at least one somatostatin-type, bombesin-type and LHRH-type receptors. The compounds have improved properties such as targeting specificity, systemic toxicity and pharmacokinetics. The present sequence is that of a peptide which may be used during the production of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cytotoxin, cytostatic; antiarteriosclerotic; antiinflammatory; vasotropic; fibrosis; prostate hyperplasia; atherosclerosis; restenosis;

                                                                                              comprise a cytocoxic moiety bound to a targeting moiety. The invention may be useful for the production of compounds with a cytostatic, and interestical cortic, antiinflammatory or vasotropic activity acting as somatostatin receptor radiologand binders. The invention may be useful for the treatment of disease, for example fibrosis, benign prostatic hyperplasia, atherosclerosis, restenosis, cancer (such as breast, colon, pancreas, prostate, lung, small cell lung, ovarian, hematopoletic and epidermal cancer) and disease associated with undesired proliferation of cells that express at least one somatostatin type, bombesin type and LHRH type receptors. The compounds have improved properties such as targeting specificity, systemic toxicity and pharmacokinetics. The present sequence is that of a peptide which may be used during the production of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                   This invention relates to novel targeted cytotoxic compounds which

N;Alternate names: hypothetical protein T8K22.8
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Species: 01-Feb-1999 #sequence_revision 01-Feb-1999 #text_change 09-Jul-2004
C;Accession: T00602; G84438
R;Rounsley, S.D.; Lin, X.; Ketchum, K.A.; Crosby, M.L.; Brandon, R.C.; Sykes, S.M.; Kaul. Submitted to the BMBL Data Library, June 1998
A;Description: Arabidopsis thaliana chromosome II BAC T8K22 genomic sequence.
A;Reference number: Z14192
A;Accession: T00602
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross-references: UNIPROT:Q9ZV95; UNIPARC:UP1000009C868; GB:AE005173; NID:g3834317; PII

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Angelesmic reticulum retention receptor Erd2 - Arabidopsis thaliana

N.Alternate names: 26K endoplasmic reticulum retention receptor
C. Species: Arabidopsis thaliana (mouse-ear cress)
C. Date: 0'-Apr-1994 #sequence_revision 18-Nov-1994 #text_change 09-Jul-2004
C. Date: 0'-Apr-1994 #sequence_revision 18-Nov-1994 #text_change 09-Jul-2004

Proc. Natl. Acad. Scit. U.S.A. 90, 11433-11437, 1993
A. Title: The Arabidopsis endoplasmic reticulum retention receptor functions in yeast.
A. Reference number: A9677; MUID:94068617; PMID:8248265
A. Contents: ecctype Columbia
A. Accession: A49677
A. Status: preliminary; not compared with conceptual translation
A. Molecule type: nucleic acid
A. Residues: 1-215 ciazz
A. Contents: ecctype: UNIRROT:P35402; UNIRARC:UP1000000117D
A. Note: sequence extracted from NCBI backbone (NCBIP:140528)
C. Function:
A. Description: achieves retention of proteins specific to the lumen of the endoplasmic rusually KDEL in animal cells and HDEL in budding yeasts
C. Superfamily: KDEL receptor
C. Superfamily: KDEL receptor
C. Keywords: Golg! apparatus; protein trafficking; sorting signal recognition; transmembr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hypochetical protein F31B9.1 - Caenorhabditis elegans

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 18

QIADS5
early IB SK protein I - human adenovirus 5

C; Species: Mastadenovirus h5 (human adenovirus 5)

A; Note: host Homo sapiens (man)

C; Date: 02-Apt-1982 #text_change 09-Jul-2004

C; Accession: A03809

R; Bos, J.L.; Polder, L.J.; Bernards, R.; Schrier, P.I.; van den Blsen, P.J.; van der Eb, Cell 27, 121-131, 1981

A; Title: The 2.2 kb Blb mRNA of human Ad12 and Ad5 codes for two tumor antigens starting A; Teterace number: A90814; MUD:82115327; PMID:7326748

A; Accession: A03809

A; Molecule type: mRNA

A; Residues: 1-496 < Ebos

A; Coss. references: UNIPROT: P03243; UNIPARC: UP10000129A8C; GB:X02996; GB:J01967; GB:J01967; GB:V00026; GB:V00027; GB:V00029; NID:958484; PIDN:CAA26743.1; PID:958491

C; Genetics:
A; Map posttion: 5.5-9.6

C; Superfamily: adenovirus early ElB protein I

C; Keywords: early protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A30924 hypothetical protein D1007.5 - Caenorhabditis elegans C309chetical protein D1007.5 - Caenorhabditis elegans C; Species: Caenorhabditis elegans C; Species: Caenorhabditis elegans C; Species: 22-Oct -1999 #text_change 21-Jan-2000 C; Accession: T30924 R; Davidson, S: Rohlfing, T. nitrate reductase [NAD(P)H] (EC 1.7.1.2) - yeast (Pichia angusta)
NyAlternate names: assimilatory nitrate reductase
NyAlternate names: assimilatory nitrate reductase
C;Species: Pichia angusta
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: 865938; T43157
